Such DNA, antigen or antibody
Claim 2; Page 4; 5pp; German.
The DNA may be used as a hybridisation probe for detecting the HLA
B27 gene, e.g. for assessing susceptibility to rheumatic disorders
such as ankylosis spondylitis, or may be used to transform cells
for prodn. of HLA B27. The HLA B27 may be used to detect HLA B27
antibody in human serum, or to produce mono- or polyclonal HLA B27

DNA coding for human histocompatibility antigen HLA-B 27 - useful for diagnosis and antigen and antibody prodn.

for diagnosis and antigen and antibody prodn.

for diagnosis and antigen and antibody prodn.

THE DNA may be used to detect the HLA-B 27 gene (opt. mutated) in human genetic material. The HLA-B 27 may be used to detect anti-HLA-B 27 antibodies in human serum. The antibodies may be used to determine HLA-B 27 lavels in human serum, e.g. for diagnosis of rheumatic disorders, esp. ankylosing spondylitis.

Detecting pre-disposition to seronegative spondylarthropathies - Trom the absence of a C residue at a specific position in the from the absence of a C residue at a specific position in the 3'-flanking region of the HLA B27 allele Gametic predisposition to seronegative spondyloarthropathies (SNSA) is detected by determining the absence of a cytosine nucleotide in the 3' flanking region (see also T61647-48) of an HLA-B gene at a position corresponding to nucleotide 4495 of the HLA-B37 consensus caquence given in T61639. Probes and primers (see also T61640-46) chased on this region can be used in diagnostic assays to detect the genetic predisposition to SNSA, and permit the distinction of B27+ individuals who are resistant to SNSA, and permit the distinction of B27+ individuals who are resistant to SNSA, romal individuals who are susceptible (but as yet unaffected) to such diseases. Claim 2: ppil-12: 23pp: English.

The HLA class I DNA can be used a source of probes for use in DNA typing. Transformed cells, which are useful as immunogens, can be obtained by introducing these DNAs into eucaryotic cells.

The spleen lymphocytes were fused with myeloma cells (P3x63-Ag8.653). Hybridomas producing antibodies were selected. Sequence 1089 BP; 223 A; 336 C; 359 G; 171 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI: 90-255479/34.
Allotype specific monoclonal anti- HLA antibodies prodn. - using hybridomas derived from transgenic animals carrying HLA gene and immunised with HLA antigen of different allotype Disclosure; Fig 1 A-G; 20pp; English.
The human HLA-BW52 gene was introduced into mouse L cells and then these cells used to immunise one of the transgenic mice (see Q05693).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           005701;

Transgenic non-human mammalian HLA-Bw 52 gene - useful for analysis of expression of gene structure, and prodn. of malysis of expression of gene structure, and prodn. of malysis of expression of gene structure, and prodn. of passes of bisclosure; Fig 1; 8pp; Japanese.

Disclosure; Fig 1; 8pp; Japanese.

Disclosure; Fig 1; 8pp; Japanese.

The sequence shows the exon 2 alpha-1-domain of the human leukocyte antigenes by pref. rat or mouse, or their ancestors at the primary developmental biological step via transplantation into the zygote or embryo to generate transgenic non-human mammals incorporating the non-human mammals contg. HLA-Bw 52 are useful for the analysis of expression of the gene, its structure, and prodn. of mouse models of cuman disease.

New DRA for class I human leucocyte antigens and derived probes and transformed cells, useful for DNA typing, as immunogens etc.

T transformed cells, useful for DNA typing, as immunogens etc.

Claim 1: Page 11: 23pp; English.

Claim 1: Page 11: 23pp; English.

The HLA class I DNA cells, which are useful as immunogens, can be useful as immunogens, can be cotaling these DNAs into eucaryotic cells.

PT HLA-BW53 gene, DNA probe and transformant cells - used for immunisation, identifying specificity of antiserum etc.

PT immunisation, apart of the sequence can be used to identify comprising part of the sequence can be used to identify can imals and prodn of monoclonal antibodies specific for the can imals and prodn. of monoclonal antibodies specific for the companies.

CC animals and prodn. of monoclonal antibodies specific for the cCC animals and interpretation of specific for the sequence of the sequence of interpretation of specific for the sequence of the sequence of interpretation of specific for the sequence of the sequence of interpretation of specific for the sequence of the specific for the sequence of the sequence of the specific for the specific for the sequence of the specific for t
         Allotype specific monoclonal anti- HLA antibodies prodn. - using hybridomas derived from transgenic animals carrying HLA gene and immunised with HLA antigen of different allotype busic with HLA antigen of different allotype busic busic busic has an HLA-BSI gene was injected into fertilised mouse eggs and then these introduced into the uterus of a pseudo pregnant mouse. The young were tested to ensure incorporation of the gene into the produces, and one of them mated 3 times with a normal male to produce 16 young, seven of which carried the HLA-BSI gene. The transgeneic offspring were immunised with HLA antigen. The spleen lymphocytes were fused with myeloma cells. Hybridomas producing antibodies were selected.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human leukocyte antigen; probe; major histocompatibility complex;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 It is a non-coding regulatory sequence functioning as an internal entry point for the eukaryotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  for the Schmidt-Rupin strain nucleotides 8673-9146. This region also includes a 56 bp region of a synthetic oligonucleotide which modifies this regulatory sequence to effect a higher level of expression of downstream sequences. The oligonucleotide removes a polyadenylation signal sequence originally found
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HLA-B7 heavy

                                                                                                                                                                                                                                                                                                                                                                                                                           WPI: 95-036494/05.
WPI: 95-036494/05.
New vectors for gene therapy, partic for tumours - comprising genetic material encoding one or more cistron(s) which express immunogenic or therapeutic peptide(s) immunogenic or therapeutic peptide(s) immunogenic or therapeutic peptide(s).
This HLA-B7 antigen encoding plasmid was developed to incorporate many advantageous features, eg. the kanamycin resisitance gene. The eradication of two open reading frames encoding portions of SV40 viral proteins lowers the risk of tumourigenicity. The vector may also operate as a cassette into which cistrons may be inserted and removed at will for the transcription and subsequent translation of peptides of interest.
                                                                                                                                                                                                                                                                                23-AUG-1995 (first entry)
pHLA-B7 expression vector.
percession vector; pHLA-B7; beavy human HLA-B7; bicistronic mRNA;
light beta-2 microglobulin; class I major histocompatibility complex;
MHC; human leukocyte antigen; HLA; covalently closed circular DNA; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note= "kanamycin resistance gene open reading frame;
the gene is taken from the transposable element

PR New vectors for gene therappy, partic for tumours - comprising

PT (Ind. M) Properties in English.

PR New vectors for gene therappy, partic for the plasmid by the case of the margines of a class I major hisotocompatibility complex (MFC) antigen of the plasmid is designed to express these two proteins via a bicistronic mRNA in class arcoma Virus (RSV) promoter sequence deriv. from the 3' long terminal repeat. Permination of transcription is dependent upon the polyadenylation signal sequence deriv. from the bovine growth hormone gene. Eukaryotic cell translation of the heavy chain is regulated by the CITE. Finally the replication of the plasmid in bacterial cells is controlled by the presence of a bacterial origin of creplication. The vector is used partic. for the treatment of mopplastic cell disease, eg. melanoma, and provides enhanced gene delivery and expression of the plasmid controlled by the presence of a bacterial origin of the company case of the plasmid or the controlled by the presence of a bacterial origin of the company and expression the company or company case of the company case o

Human Class I non-classical HLA gene exon 2 consensus DNA.
Human leukocyte antigen class I gene; non-classical HLA; allele testing;
donor; tissue matching; recipient; graft rejection; class typing; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        HIA-C gene, DNA probe and transformant cells - for immunisation of animals and monoclonal antibody development.
Claim 1; Page 1; 13pp; Japanese.
Probes comprising part of the sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HIA-C animals and prodn. of monoclonal antibodies specific for the HIA-C sequence 1101 BP; 211 A; 337 C; 377 G; 176 T;

The HLA Class I gene is selected from among HLA-A, be and -C genes. The method comprises of treating the tissue sample to obtain nucleic acid polymers suitable for amplification then combining these polymers with a first primer which hybridises with a different portion of the HLA Class I gene and a second primer which hybridises with a different portion of the HLA Class I gene under conditions suitable for amplification to obtain an amplified product. The product is then evaluated to determine the allelic type of the HLA-Class I gene. The method is useful for tissue matching HLA class I antigens between donors and recipients and hence for preventing graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human leukocyte antigen; probe; major histocompatibility complex; MHC; class I; ss.

Immunising animals, for developing monoclonal antibody.
Claim 1: Page 1; 11pp; Japanese.
Probes comprising part of the sequence can be used to identify Class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HLA-B35 antigen. See also J03112485 and J03112487.
Sequence 1089 BP; 221 A; 336 C; 359 G; 173 T;

HIA-C gene, DNA probe and transformant cells - for immunisation of animals and monoclonal antibody development.

Claim 2; Page 1; 13pp; Japanese.

Probes comprising part of the sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HIA-C animals and prodn. of sequence antigen. /clone_lib="Human pancreatic islet"
/clone_vector: Lambda ZAPII: Site_1: Eco RI; Site_2: Xho
I: mRNA was prepared from normal adult human islets. CDNA
was directionally synthesized from the Xho I in the vector
to the EcoRI site. CDNA was size fractionated to remove
sequences <1000 bp in size."

WARNING: There is evidence that suggests that the 384-well parent
plate of this clone contains both human and mouse derived clones.
Thus, the origin of this clone is uncertain. This caution should be
kept in mind should you use this clone.

PŢ	Extension of acceptance period of transplants from MHC unmatched
ΡŢ	donor hosts - using Class I B75-84 MHC antigen of the recipient
Τď	host
S	Example 15; Page 36; 80pp; English.
ပ္ပ	R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of
ပ္ပ	class I major histocompatibility complex (MHC) antigens. This sequence
អ	corresponds to residues 70-84 of the alpha-1 domain of the class I MHC
អ	HLA-B2702. These sequences can be used to extend the period of
ប្ដ	acceptance by a recipient of a transplant from an MHC unmatched donor.
ပ္ပ	The peptides are administered to a patient in conjunction with a
ပ္ပ	subtherapeutic amount of an immunosuppressant. This is administered to
ပ္ပ	the patient for a limited period of time (compared to the lifetime
ပ္ပ	administration for current treatments). The peptides particularly
ပ္ပ	modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs)
ပ္ပ	of the patient.

With the sequence in the brackets may optional anique compound of transplants or treating automatical diseases.

For treating activity, including the N-terminal activity diseases.

For the peptide-type compound comprises the formula: A-B, where A, B = C, C example and A-B a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mew peptide(s) based on class I HLA antigen domains - used for modulating cytocoxic T-lymphocyte activity towards targets T-lymphocyte activity towards targets Tolaim 8; Page 53; Glpp; English.

The peptide (or a fragment of at least 10 amino acids, joined at at least one terminus to a sequence other than that of wild type HLA antigen) is used to modulate cytocoxic T-lymphocyte (CTL) activity, and thinbition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which bind to it and removing subsets of CTLs from a T-cell composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        15-MAR-1994 (first entry)
Peptide fragment of Class I HLA peptide.
Human leukocyte antigen; HLA; peptide; transplantation; neoplasia; parasitic disease; cytotoxic T lymphocyte; modulation.

R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HIA-B2702.60-84.

HIA-B2702.60-84.

HIA, p74; alphal-helix; human-leucocyte-associated antigen; inhibitor; r-cell lysate; membrane protein; mammal; heat shock protein; Hsc70; APC; B cell; calcium influx; cytotoxic T lymphocyte; CTL; differentiation; cytolysis; antigen presenting cell.

```
from a T-cell lyst first T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein HSTO. p74 is found in a limited number of cell types, but is particularly expressed on a mamphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-BZ702 palindromic peptide.

Compositions comprising the extracellular fragment of p74 combined with this sequence, induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate composition containing the critisis and antigen presenting cells (APCS), by adding to the mix the extracellular composition containing of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PERION K, Liapperger C, Mensky AM;

New immunomodulating dimer peptide(s) - based on a Class I HIA-B
alpha-1 domain, used for preventing rejection of transplants or
reating autoimmune diseases

Example 1; Page 19; 41pp; English.

PER Example 1; Page 19; 41pp; English.

PER Cativity A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or
C-terminal amidated or esterlified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, Sor N; aa79 = R or G; aa80 = I or N; aad a represents amino acid: aa82 = R or L; aa83 = G or R; and aa represents amino acid: The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets: The compounds comprise at any peptide type bond within the brackets: The compounds comprise or at any peptide type bond within the brackets: The compounds comprise or at any petide type bond within the brackets or of truncated at any petide type bond within the protection of T cells in news or in combination with antigenic peptides or proteins of interest to activate CTLS: They can be used to inhibit the proliferation of T cells in response to anti-CDS. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, response to anti-CDS. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, response to anti-CDS. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, response to an addiagnosis. The products can also be used for detection and diagnosis. The products can also be used for detection and diagnosis. The products can also be used for detection and diagnosis. The products can also be used for detection and diagnosis. The products can also be used for preventing expense t

The peptide is used to modulate cytotoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which bind to it and removing subsets of CTLs from a T-cell composition.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 4; Page 45; 103pp; English.

R71439-R71443 are human major histocompatibility complex class 1
(MHC 1) alpha 1 domain and HLA derived peptides and fusion peptides.
They were used to modulate interactions between MHC 1/HLA and cell
surface receptors. Via competitive inhibition the peptides diminish
the receptors response, this feature may be useful for the treatment
of neoplasias, lupus erythematosus and arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The sequence and the sequence and transments of human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the than-1205.60-84. These sequences can be used to isolate the protein of from a T-cell lysate. P74 is a T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. P74 is cound in a limited number of cell types, but is particularly expressed on amphoteric detergent, and then passed through an affinity column amphoteric detergent, and then passed through an affinity column containing a covalently bound HA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of P74 combined with HA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate Compounds can be screened for their effect on the cytolytic activity of CT-cells, by combining them with the extracellular portion of P74 and determining the amount of binding between the candidate compound and P74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by adding to the CM with P74 for the binding of the P74 ligand.
                                                                                            Compsons. comprising lymphoid surface membrane proteins - which me inhibit cytolytic activity and differentiation of CTLs. Example; Page 9; 29pp; English. R95413, and R95415-R95431 represent palindromes and fragments of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 13; Page 32; 80pp; English.
R83061-R83096, R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HIA-B3702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               12-NOV-1996 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HLA-B2702 CTL modulating peptide (B2702.60-84).
Cytotoxic I lymphocyte, CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                               Gaps
                   This peptide is derived from the HLA-B2705 antigen and corresponds to the amino acid positions 60 \cdot 84 of that antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MHC unmatched

Such DNA, antigen or antibody
Disclosure: Page 5: 5pp; German.

The DNA may be used as a hybridisation probe for detecting the HLA B27 gene, eg for assessing susceptibility to rheumatic disorders such as ankylosis spondylitis, or may be used to transform cells for prodn. of HLA B27. The HLA B27 may be used to detect HLA B27 antibody in human serum, or to produce mono- or polyclonal HLA B27 sequence 337 AA;

R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HLAB38. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an WHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HLAB38 CTL modulating peptide (B38.6084).

Yotocoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLAB38.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HIA; p74; alphal-helix; human-leucocyte-associated antigen; inhibitor; T-cell lysate; membrane protein; mammal; heat shock protein; Hsc70; APC; B cell; calcium influx; cytotoxic T lymphocyte; CTL; differentiation;

DNA coding for human histocompatibility antigen HLA-B 27 - useful bisclosure: p6: 13pp; German.
Disclosure: p6: 13pp; German.
THE DNA may be used to detect the HLA-B 27 gene (opt. mutated) in human genetic material. The HLA-B 27 may be used to detect anti-HLA-B 27 may be used to detect anti-HLA-B 27 levels in human serum. The antibodies may be used to determine HLA-B 27 levels in human serum, eg for diagnosis of rheumatic disorders, esp. ankylosing spondylitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mew peptide(s) based on Class I HLA antigen domains - used for modulating cytotoxic T-lymphocyte activity towards targets Example 13; Page 39; 61pp; English.

The peptide is used to modulate cytotoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and meoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which bind to it and removing subsets of CTLs from a T-cell composition. This peptide is derived from the HLA-B38 antigen and corresponds sequence 25 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        15-MAR-1994 (first entry)
Peptide fragment of HLA-B38 antigen.
Human leukocyte antigen; HLA; peptide; transplantation; neoplasia; parasitic disease; cytotoxic T lymphocyte; modulation.
                                                                                                                                                                                                                                                                                                                                                               03-APR-1991 (first entry)

The state of the state of

```
Human-leucocyte-associated antigens. This sequence represents the Highs 6084. These sequences can be used to isolate the protein p74 from a T-cell lysate. p74 is a T-cell surface membrane protein associated at the T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Hs70. p74 is found in a limited number of cell types, but is particularly expressed on B and T cells. p74 can be isolated by lysis of a suitable cell with an ampotent detergent, and then passed through an affinity column comprising a covalently bound HIA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of p74 combined with HIA-B2702.60-84 (see R95416), induces calcium influx, and inhibits compositions can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracellular portion of p74 and centraling the amount of binding between the candidate composition of containing T-cells and antigen presenting cells (APCS), by adding to the mith p74 for the binding of the p74 in an amount sufficient to compete with p74 for the binding of the p74 ligand.
and R95415-R95431 represent palindromes and fragments of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 11
S77653
MHC class I histocompatibility antigen HLA-A alpha chain precursor - human (isolate c; Species: Homo sapiens (man)
A; variety: isolate A*2402
C; bate: 13. Jan.1995 #sequence_revision 15-Aug-1997 #text_change 23.Jul-1999
C; Accession: S77963
